Approved For Release 2001/03/01 : CIA-RDP33-02415A000500390006-7

11-29-60

Gene -

These represent the recent base situation from which we are proceeding to evaluate addition of vertical stabilizers, inlet spikes, etc. The vertical stabilizers are making a significant increase over these patterns at broadside, but the inlet treatment shows no detectable increase. The 12° curves I consider the most significant as that is the angle of the potent beam against which we work.

Frank
